Chapter 3: Two-Dimensional Kinematics. In this chapter we generalize the study of motion in one dimension to the motion of objects in two dimensions. In doing so we discuss two of the most important forms of two-dimensional motion, projectile motion and circular motion. Table of Contents Illustrations. Illustration 3.1: Vector Decomposition. Illustration 3.2: Motion on an Incline.

Projectile motion is a form of motion where a projectile is thrown near the Earth's surface with some horizontal component to its velocity. The projectile moves along a curved path under the action of gravity. The path followed by a projectile is called its trajectory. Projectile motion is motion in two directions.
