Digital image processing is the use of a digital computer to process digital images through an algorithm. As a subcategory or field of digital signal processing,

# Read PDF Digital Image Processing An Algorithmic Approach With Matlab

Digital image processing has many advantages over analog image processing. It allows a much wider range of algorithms to be applied to the input data and can avoid problems such as the build-up of noise and distortion during processing. Since images are defined over two dimensions digital image processing may be modeled in the form of  $m$
