The mathematical solution explains how to solve the equation:  $\sin(x+150) = 1/\sqrt{2}$  for  $x$  between  $0^\circ$  and  $360^\circ$ . To begin with, the principle values for  $(x+150)$  are found. The fact that a sine curve is periodic is used to find the solution set for  $(x+150)$  based upon these two initial values.

Solving trigonometric equations in degrees - Solving ...

Let us try to find the general solution for this trigonometric equation.  $\sin x = \sin y \Rightarrow \sin x - \sin y = 0 \Rightarrow 2\cos \frac{(x+y)}{2} \sin \frac{(x-y)}{2} = 0 \Rightarrow \cos \frac{(x+y)}{2} = 0$  or  $\sin \frac{(x-y)}{2} = 0$ . Upon taking the common solution from both the conditions, we get:  $x = n\pi + (-1)^n y$ , where  $n \in \mathbb{Z}$ .

$\tan \theta = x$ .  $\tan(x)$   $\tan x$  repeat after an interval of  $\pi$ . If the equation involves a variable  $0 < x < 2\pi$ , then the solutions are called principal solutions. A general solution is one which involves the integer 'n' and gives all solutions of a trigonometric equation.

Trigonometric Equations: General & Principal Solutions ...

1 Answer Step 1: Find the trigonometric values need to be to solve the equation. Step 2: Find all 'angles' that give us these values from step 1. Step 3: Find the values of the unknown that will result in angles that we got in step 2.

How do you find all solutions trigonometric equations ...

From the following diagram we see that  $\sin(\theta - \pi) = \sin \theta$  and  $\cos(\theta - \pi) = -\cos \theta$ . We use this to find the solutions of some trig equations. Solve  $\sin(x) = y$  for  $x$ . Case 1:  $-1 \leq y \leq 1$ , that is, the value of  $y$  is between -1 and 1, so there is a solution.

mc-TY-trigsp-2009-1 In this unit we consider the solution of trigonometric equations. The strategy we adopt is to 'find one solution using knowledge of commonly occurring angles, and then use the symmetries in the graphs of the trigonometric functions to deduce additional solutions. Familiarity with the graphs of these functions is essential.

Trigonometric equations

There are two methods to find the solution of a trigonometric equation: Use the graph of the trigonometric functions. Use the four quadrants of the coordinate grid. The first step in both cases is to find the principal value, (or PV of  $\theta$  which is the value you get from the calculator).
